## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 2, 2008, has been entered.

2. Claims 3 and 4 have been canceled. Claims 1, 2, 5-8 and 21 are pending.

### ***Response to Amendment***

3. The declaration under 37 CFR 1.132 filed July 2, 2008, is sufficient to overcome the rejection of claims 1, 2, 5-8 and 21 based upon the admitted prior art in view of Bergeron et al (CA 2 350 814 A1) and Townsend (US 5,227,045) under 35 U.S.C. 103.

### ***Allowable Subject Matter***

4. Claims 1, 2, 5-8 and 21 are allowed.

5. The following is an examiner's statement of reasons for allowance:

Applicant's Remarks taken with the declaration under 37 CFE 1.132 by Dr. Pierre-Yves Brisson filed on July 2, 2008, are considered to be persuasive with respect to the patentability of the claims. As pointed out by applicant at page 5 of the Remarks, Bergeron et al describe a combination of an additive mixture with carbonaceous material that includes at most 3-10% of  $\text{TiB}_2$  powder. This amount of  $\text{TiB}_2$  is not enough to make the surface of the carbonaceous material wettable as required by claim 1. The declaration shows that the minimum amount of  $\text{TiB}_2$  required to make the surface wettable is somewhere between 15 and 20% by weight. See Table 6. This is consistent with Townsend which teaches that 20% is about the minimum. In paragraph 3 of the declaration, mixture M is described as a mixture of powders of  $\text{TiO}_2$  and  $\text{B}_2\text{O}_3$ . Claim 1 has been amended to recite an intimate mixture of  $\text{TiO}_2$  and  $\text{B}_2\text{O}_3$ . As amended, the mixture of claim 1 is commensurate in scope with that used in the experiments reported in the declaration. In Table 7, the declaration provides data showing that the inclusion of additive mixture M in amounts of 10 and 25 % by weight in a composition containing 20 % by weight of  $\text{TiB}_2$  reduces the erosion of the cathode blocks. The data are shown graphically in Figure 5. This is the effect described in paragraph [0023] of the specification which states that the additive reacts with molten aluminum in the reduction cell to form a dense phase at the surface of the cathode block, and that this dense phase reduces

erosion of the cathode block. At page 8 of the Remarks, applicant notes that the improved erosion resistance obtained by the additions of the additive over and above that produced by the additions of  $\text{TiB}_2$  is an unexpected result.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
